

Snowpark – slot game

The rules of the game:

The player can select the value of coins which he will use for the game. He will further choose the bet lines that are checked for occurrence of a winning combination. The last bet setting is the selection of the number of coins to be staked on the determined bet lines. Now the wheel can be spun, or there is a possibility of an automatic spinning.

If a winning combination according to the winnings table occurs on any bet line, the player wins. If more winning combinations occur on one bet line, the higher of them is paid out. The winning combinations are always considered from the very left side on the bet line towards the right.

There are also some special symbols on the machine in addition to the traditional ones. The WILD symbol substitutes for any symbol needed except for the SCATTER and bonus symbol. If bonus symbols according to the winnings table occur, the player is promoted to the bonus game. If the SCATTER symbols occur anywhere (regardless of the bet lines), a special win is calculated according to the table. The total amount of bet is multiplied by the winning coefficient. If more SCATTER symbols occur than their maximum number in the winnings table, the win is calculated as for the maximum number of symbols in the table.

Rules of the bonus game:

First choose your race track. For each trick the athlete performs successfully, you will be awarded points that are then changed into Casino chips on your account.
